PROFILE

Persistent AI and Data Science professional with practical experience applying to CyberSecurity data Eager to solve complex problems, overcoming technical challenges, and contributing to impactful, real-world projects.

EXPERIENCE

AI and CyberSecurity Intern - SQ1 Security Private Limited **June 2025 – Nov 2025**

VULNERABILITY DETECTING PRODUCT

- A security software tool for detecting vulnerabilities in Windows and Linux desktops.
- GenAI + RAG to generate - vulnerability, weaknesses, and step-by-step patch(Exploits).
- Debezium with PostgreSQL and indexed embeddings using pgvector.

POLICY TOOL

- A RAG based response(FastAPI) to manage organization-specific policy agreements.
- Qdrant Vector DB, performed - authentication, rollback mechanisms, and data versioning.

OCR TOOL

- Extracted text from scanned medical documents using DocTR for accurate OCR processing.
- Fine-tuned a Biomedical NER model to extract diagnosis phrases and RAG for ICD code mapping.

TASKS

- Integrated StackFlo and OCR tool into a single **MCP Server**, single client LLM (Meta-Llama 3.1).
- R&D to develop an automated **SIEM monitoring tool**, rule-based event correlation and malware analysis.

PROJECTS

• SPEECH-TO-SIGN TRANSLATOR SYSTEM (2024)

- Real-time communication system converting Tamil speech to sign language regional gestures.
- Transcribed speech to text using fine-tuned ASR models - Whisper Tamil Medium/Large V2.
- Mapped text to gesture GIFs and concatenated them into a video stream for output.

• CUSTOMER EMOTION ANALYSIS SYSTEM (2025) [Model](#) [Dataset](#)

- AI pipeline to scrape and analyze Amazon product reviews using ScrapingDog API.
- Trained a DL model for Sentiment analysis, used NLP techniques on scraped data.
- Developed a Streamlit dashboard with visualizations for sentiment trends and customer insights.

• CUSTOM EMAIL GENERATOR (2025)

- Analyzed Gmail "Sent" messages to learn user's writing style for personalized email generation.
- Streamlit UI with guided drafting, editable previews, and SMTP-based sending.
- Used local LLM (Mistral 7B) + RAG for context-aware template generation.

• FACT VERIFICATION AGENT SYSTEM (2025)

- Multi-agent system using A2A protocol:
 - Agent 1 retrieves web evidence via Google Search API.
 - Agent 2 compares claim vs evidence using semantic embeddings.
- Outputs verification result (True / False / Uncertain) with confidence scores.

EDUCATION

M.Sc. Artificial Intelligence and Machine Learning (Integrated)	2022 – Present
Coimbatore Institute of Technology, Coimbatore	CGPA: 8.4 (Till 6th Semester)
Higher Secondary Education (HSC)	2021 – 2022
Mahendra Matric Hr Sec School, Namakkal	Percentage: 89.4

ACHIEVEMENTS

- **2024** - Secured **First Prize** at **TechStars Startup Weekend Sustainability**.
- **2024** - Secured **First Place** in the **Impairathon** hackathon for assistive technology solutions, competing against 360 teams across TamilNadu. The event was conducted by **StartupTN**.
- **2025** - Finalist among 600 teams in the **Shaastra Programming Contest 2025**, organized by **IIT Madras**.

TECHNICAL SKILLS

Programming Languages: Python.

Database: Firebase, MySQL, PostgreSQL.

AI Technologies: ML and DL models, CV, NLP, RAG, Multi-model RAG, MCP, Agentic-AI, A2A Protocol.

Big Data & Data Analytics Tools: Debezium, Kafka, ZooKeeper, PowerBI.

Cloud & Version Control: Docker, AWS, Git.

Soft Skills: Adaptability, Team Collaboration, and Communication Skills.
